

**The chewy-regular font used as a “customFont” is licensed for free use, see:

“These fonts are licensed under the [Apache License, Version 2.0](https://www.apache.org/licenses/LICENSE-2.0).

You can use them freely in your products & projects - print or digital, commercial or otherwise.

However, you can't sell the fonts on their own.”

From “ <https://fonts.google.com/specimen/Chewy> “

**The Font Awesome is an opensource and free-license font providing icons. This asset was only used for its icons in the “order” and “find us” page and the footer of every page of this project and nothing else. This font is used from the link associated with the html file and no CSS was imported anywhere else in the project apart from the links in the html file.

**All images in this project are licensed for free-use/ labelled for re-use.

-I used a yellow and black colour palette since theyre colours commonly found in food industry alongside red

-I used grids to lay out every page since they give biggest amount of customization

-I’ve given the homepage and menu a main image for visual appeal while leaving the “meal deals” without one for variety

-Created a sticky navigation bar for every page for ease of access throughout the site

-The footer contains some information on the “find us” page because that information is important for publicity and contact

-The checkout form design was inspired by “w3schools”, however implementation was original using grids.

-I’ve used JS for the checkout button to link to the order/checkout page for simplicity

-JS used to add item to basket (however it disappears upon refresh)

-JS used for the checkout validation to ensure fields are marked and not left empty
